What is a Family Health Team?

The Thames Valley Family Health Team brings together different health care professionals who work collaboratively to deliver the highest possible quality of care.

We combine the expertise and services of different health care professionals to meet many kinds of needs.

How do we promote your health?

- By providing you with accurate, up-to-date information about the best ways to prevent illness and disease
- By helping you understand the risk factors for diseases and providing appropriate screening and follow-up.
- By working to detect, address and treat health problems earlier.
- By offering strategies to manage chronic illnesses like diabetes, depression, asthma, hypertension and COPD.

Frequently Asked Questions

How can I see a health professional?

You must be a registered patient of one of our participating physicians.

How much will it cost me?

There is no cost for any of our services. All of our programs and services are funded by the Ontario Ministry of Health and Long-Term Care.

Who are we and what do we do

Registered Nurse (RN)

We work with your family doctor and other family health team professionals to provide you with health education, screening and counselling in chronic disease management, health promotion, and disease prevention.

We also provide other services such as ear syringing, suture/staple removal, wound care, blood pressure checks, immunizations/injections, and more.

Registered Dietitian (RD)

Do you need help in making changes to your eating habits? Are you overwhelmed by all the nutrition information available out there? We will work with you to create a nutrition plan to help you prevent and manage chronic conditions or another health concern where good nutrition is important.

Social Worker (SW)

Are you facing a personal or family challenge? We can help you work through your stress, grief, depression, and anxiety, and give you strategies to improve your mental health.

We can also help you find community support and resources you might need to deal with your situation in a positive way.

Pharmacist

We can help you:

- understand when you should take your medication, why you take them and how to get them if you have trouble affording them
- make sure that all your prescriptions and non-prescription medications work well together
- with quitting smoking, managing your chronic pain, controlling your diabetes and any breathing issues.

Occupational Therapist (OT)

Are you experiencing limitations in daily activities because of injury, illness, chronic disease, disability, mental health problems, aging, etc.?

We will work with you to identify barriers and use a variety of approaches to promote health, maintain function and restore independence so that you can participate in the occupations of everyday living that are important to you.

Respiratory Therapist (RT)

Do you have breathing issues due to COPD, asthma or other respiratory concerns? We can conduct breathing tests to assess your overall lung health and we also provide treatment and education (for example, how to use a puffer).
